

treibauf pepper

The Swift Connection between
the Cash Register and the Terminal

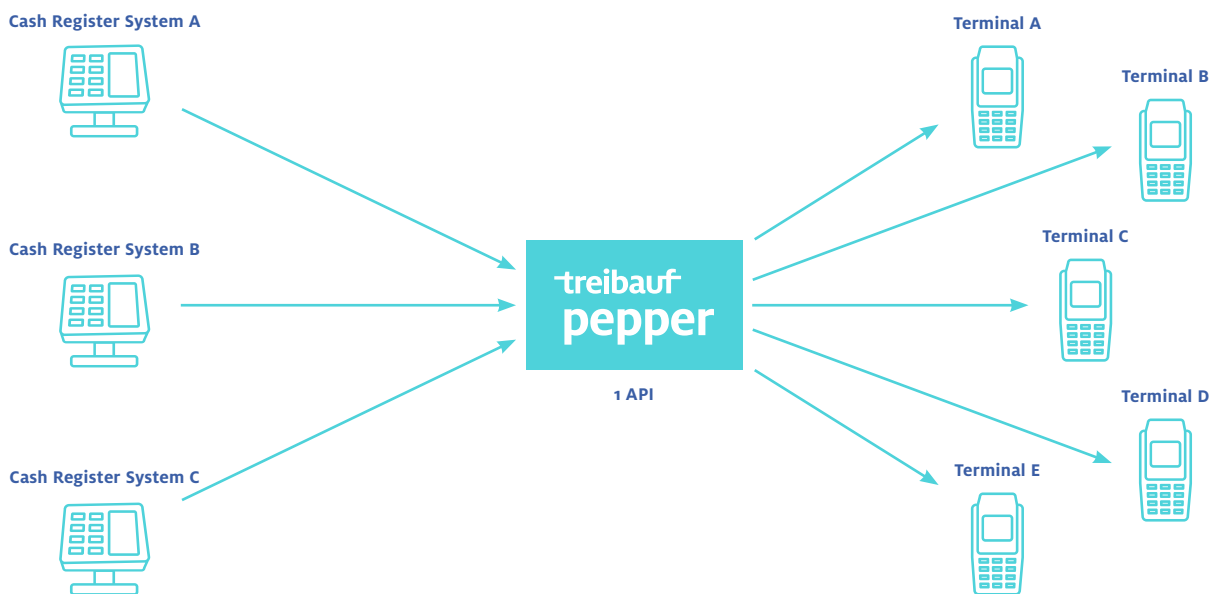

treibauf Pepper Enables a Universal, Stable and Flexible Connection

Regardless of how your payment terminals look or which cash register system you use.

Pepper? Connects it.

- treibauf Pepper sends the payment amount automatically from your cash register to the payment terminal. Thus, you avoid not only manual input errors, but also save a lot of time.
- The universal connection between all standard card terminals and cash register systems: Supports more than 200 different terminal models, 300 card types, 20 foreign currencies in 39 countries and in 15 languages.

Pepper is Flexible, Agile and Reliable.

treibauf Pepper has already been installed more than 60,000 times worldwide, simply because the software is not only as fast as lightning, but also reliable like a Swiss watch. The flexible architecture also enables the seamless integration of a wide array of terminals and cash register systems quite regardless of whether your branch is located in London or in the Bahamas.

Your Advantages at a Glance:

- **More than 20 years of experience:** Our driver software has been continuously developed since 1996.
- **Simple installation:** Thanks to the clearly-comprehensible API (interface to the application programming), treibauf Pepper can be integrated into the cash register software without any problems.
- **Save time and costs:** The manual input of the amount in the terminal requires capacities. Through the automated transmission, treibauf Pepper saves costs.
- **Remain flexible:** Regardless of which terminal type, which cash register system or which acquirer: treibauf Pepper is compatible.
- **Automatically up-to-date:** Benefit from continuous updates, extensions and corrections of the protocols based upon the market development.
- **Maximum stability:** Thousands of customers rely on the stability of our driver software for decades.
